Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from On Some Insect Deformities, Vol. 2 In arranging the Lepidoptera of the collection, I found, among the insects brought home from Brazil by Professor L. Agassiz, a specimen of *Morpho Eurylochus* with the head of the caterpillar. The excellent condition of the large specimen induced me to compare all published observations of a similar deformity. These are few, and scattered in transactions not easily accessible. Therefore I concluded to reprint the full text for the two oldest known, and to give copies of the figures, together with those of *M. Eurylochus*. In the hope of having information about other similar cases, I published a provisional paper in the *Stettin Ent. Zeit.* (1872), p.388, and I am indebted to Professor Zeller of Stettin, Professor Westwood of Oxford, Mr. McLachlan of London, and Dr. J.L. Leconte of Philadelphia, for additional information. The rare and less known paper of Mr. C. Majoli, on a precocious development of *Bombyx Mori*, and the notice of two deformities of Coleoptera, seemed to me not out of place in this paper. Perfect Insects With The Larval Head. *Phalaena heteroclita*. The well-known Danish naturalist. Professor O. F.Mueller, has described (1764) in his *Fauna Fridrichsdalina*, p. 47, No. 413, a new species of *Noctua*, found by himself at Fridrichsdal, a locality a few miles distant from Copenhagen. *Phal. N. heteroclita subcristata*, capite erucaae, antennis nullis: alis albis, lineis transversim undatis punctatisque marginalibus nigris. In *Epilobio*. This description is verbatim, repeated by himself in his *Prodromus Faunae Danicae* (1776), p.124, No. 1428. In the *Mem. de Mathem. et de Phys. presentes a l Acad. R.des Sciences a Paris*(1774), Vol. VI, pp. 508 - 611, pi....
